1.0 Project Overview (Website Purpose)

Leave Application Management System can provide users with more convenient and more complete leave services. Users can fill out the leave slips online to see if they are approved, and do not need to go to the office to apply. At the same time, the manager can also approve the fake bars online to check the status of all the fake bars.

There are three modules of the System:

- (1) Staffs (User)
- (2) Managers (Manager)
- (3) Administrators (Admin)

2.0 Tools & Technology

- HTML: For webpage layout.
- CSS: To design the webpage.
- PHP: To ensure our webpages give content that is more dynamic and to connect to the database.
- MySQL: To be used with PHP.
- JavaScript: For calendar, confirmation.

3.0 Modules

- Admin
 - Administrators can view the personal information of all employees, sort by each type of information, and view administrator information.
 - Administrators also can view the information and application status of all the fake bars.
 - Administrators can modify employees information.

- Manager
 - Managers can view the application and approve or reject the employee's leave slip.
 - Manager can modify personal information.
 - Manager can view the names and departments of all staff members who are on leave, sort by name or department, and view all leave information for each employee.

- User
 - Users can modify personal information.
 - Users can fill in the leave slip and apply for leave.
 - Users can view the application results.

4.0 Functionality

- *Admins*
 - (1) Login account
 - (2) View all users' personal information
 - (3) Modify employee information
 - (4) Delete, add new user information
 - (5) View all fake application status
 - (6) Sort fake application in ascending and descending order
- *Managers*
 - (1) Login account
 - (2) Modify Personal Information
 - (3) View all pending strips
 - (4) Approving or rejecting employee leave
 - (5) View the names and departments of all employees
 - (6) View all leave information for each employee
- *Users*
 - (1) Register an account
 - (2) Login account
 - (3) Edit personal information
 - (4) Fill in the leave and submit
 - (5) View application results

Name and Password for Project Testing

Example of user from the database:

No.	Name	Password	UserType
1	hao	00000	Admin
2	zhang	88888	Staff
3	ding	12345	Manager
4	chen	11111	Staff
5	gu	22222	Manager

Extra Functions in this Project

- Password Encrypting
- Lists can be arranged in both positive and reverse order
- Using session (passing value between page)
- Many tables are used to ease the flow of our system
- Lists can be arranged in both positive and reverse order

5.0 Database and Tables

There is a total of three tables used in the database for this project.

Database Name: db_zj

Table:

1) Name: **Application**

For: To store all leave applications.

Relate Table: staff,department

2) Name: **Staff**

For: To store staffs,admins and managers' information.

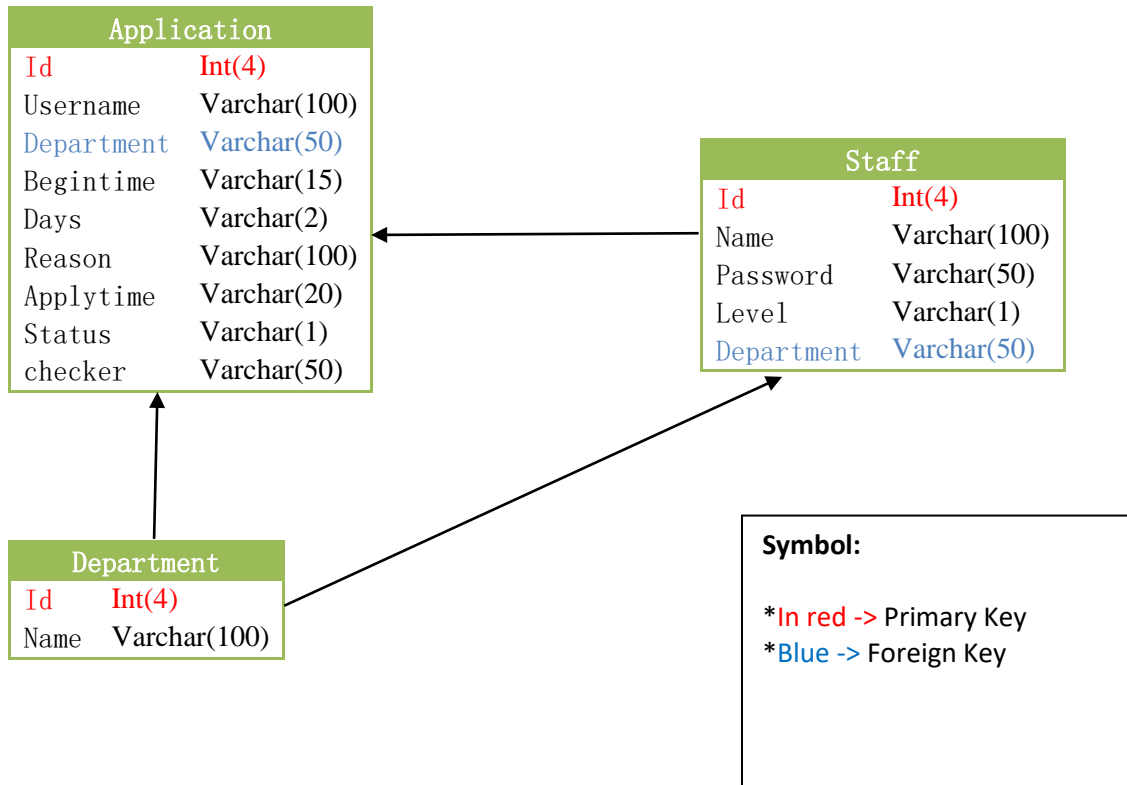

Relate Table: department,application

3) Name: **Department**

For: To store information about staffs' department.

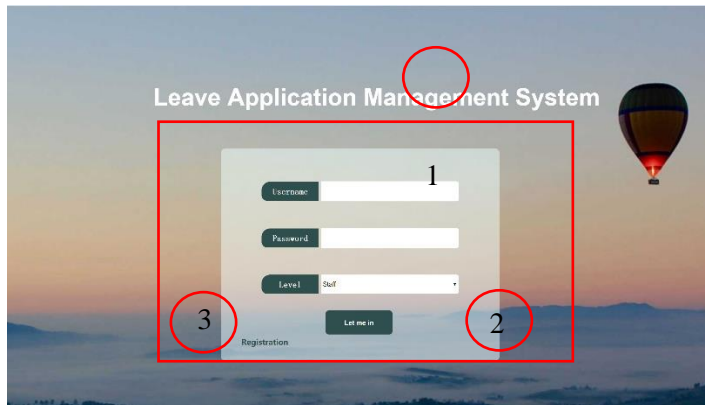

Relate Table: staff,application

5.1 Database Design with Entity Relationship Diagram (ERD)

6.0 User Manual

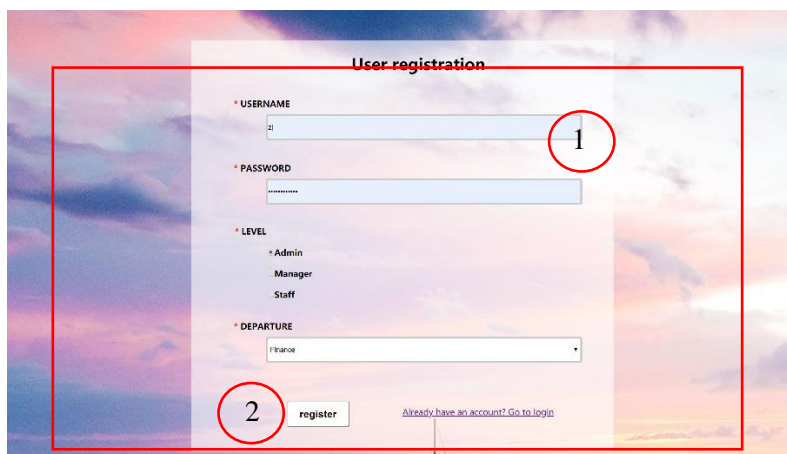

Note: Login Page

Note:

- 1 insert information.
- 2 login button
- 3 Registration button(if not have account)

Note: Registration Page:

Note:

- 1 insert information
- 2 button – registrar a new account

Note: database view – table staff

+ option

<input type="checkbox"/> edit <input type="checkbox"/> copy <input type="checkbox"/> delete	2	Zhang	88888	Staff	Finance

7.0 Conclusion

In short, Leave Application Management System can make the user's leave more convenient, the specific content of the leave is also clearly visible, you can also see the historical leave record, you can help the managers to count the leave information and view information. The admin can also handle the effective information of staffs and managers, and view all the information of both parties. It is convenient for them to improve work efficiency and save time.
